

Huge impact. Small footprint.

The most advanced, readily deployable small modular reactor is here. **The AP300™ SMR from Westinghouse.**

Since our AP300 SMR launched in May, we have seen a tremendous response from utilities and industries around the globe.

The idea was simple: fulfill the promises of small modular reactors in one technology. Basing the AP300 SMR on the licensed, operating AP1000® reactor brings advantages not found elsewhere, reducing risks for customers and securing delivery.

We look forward to sharing more good news about our AP300 SMR in 2024.
