Revive Renew Restart

For more than 65 years, we've been enhancing and accelerating every critical aspect of nuclear power generation—from cybersecurity, robotics, and instrumentation and control to reactor services and the most technologically advanced fuel.

To help optimize and secure your long-term operations, we're extending fuel cycles to 24 months, reducing outage duration and frequency, and delivering customized power uprate solutions.

We don't stop there. With over \$200 million invested annually in research and development, we continuously drive innovation that supports and de-risks your projects. Revive, renew and restart with a trusted partner—Framatome.

Count on it.
