

Building on legacy. Energizing tomorrow.

Since 1956, we've been contributing to America's clean energy future, investing in the delivery of next-generation fuels, reactor technologies and critical services to the U.S. nuclear industry and the Department of Energy.

Now, we're hiring and training a new workforce of nuclear professionals while expanding and modernizing our U.S. infrastructure — preparing to support plant restarts and the deployment of small modular and advanced reactors.

Plus, we're helping today's operating fleet optimize their performance through shorter outages, extended fuel cycles and power uprates.

No matter what this next chapter of nuclear expansion and innovation brings, depend on us to help you lead the way in safe, reliable energy production.

Count on it.
