Innovation matters

Addressing our customers' needs, helping them face challenges — it's what we're all about. That's why we continually invest in research and development, creating new, innovative products and services like our cutting-edge Crane Hook Tracking System (CHTS).

The CHTS utilizes a remote interface and dual-positioning LiDAR to provide you with real-time, accurate, on-screen 3D coordinates of the crane hook during critical lifts. You can then use that data to establish exclusion zones, enhancing safety and saving time. This technology improves efficiency and reduces the possibility of human error.

Innovation matters to your optimized performance. That's why it matters to Framatome.

Count on it.
