

HOLTEC INTERNATIONAL:
Leading The World in Nuclear
Innovation Then, Now, and
Tomorrow

From state-of-the-art nuclear storage and transportation solutions to advanced reactor systems **Holtec International** is shaping the future of clean energy technology and innovation.

Holtec powers progress around the globe with engineering excellence and a commitment to safety. That's why the world nuclear power industry has looked to us since 1986.

With manufacturing facilities in Camden, New Jersey, East Pittsburgh, Pennsylvania, Orrville, Ohio, and Pune, India, Holtec's expert engineers, scientists, technicians and craft workers custom design, manufacture, test and install all its used fuel storage and transportation deliverables.

In 1992, we launched our revolutionary dry storage and

transport cask product line including the industry's first multi-purpose canister, the first dual purpose metal cask, the first transport cask qualified for high burn-up and MOx fuel, and the first double wall canister.

Today, 81 nuclear power facilities in the US and 68 worldwide depend on Holtec International's wet and dry storage and transportation products and equipment because of the company's inherent safety, quality and dependability.

But Holtec will never stop evolving. We always look forward to tomorrow and we will continue to find a better way. Leading the way are our new technologies that will satisfy our world's need for reliable, earth-friendly energy.

- **SMR-300™**, a small modular reactor capable of generating clean, safe, secure electricity most anywhere in the world
- **Green Boiler**, a breakthrough in clean energy storage and on-

demand energy delivery

- **HI-THERM HCSP**, a clean sustainable solar generation plant that is cost competitive with fossil fuel facilities.

And, Holtec is leading the new nuclear power revolution as the owner of Holtec Palisades, the first shuttered nuclear plant in the United States to restart operations!

For nearly 40 years, Holtec International has embodied its credo: "A Generation Ahead by Design." It's more than a motto—it's a promise to our customers, our communities, and our planet to lead with innovation and purpose.

Holtec International is the

GLOBAL LEADER

in safe, low-dose, nuclear waste management solutions and we have developed a fleet of robust storage and transport systems, licensed by regulatory authorities worldwide. This is to manage the full inventory of waste from low-level to spent nuclear fuel, non-fuel hardware, and other forms of high-level waste.
