

The I&C platform nuclear has been waiting for.

Brian Haynes
Vice President, HIPS

Our Energy Future is Nuclear. Paragon is Proud to Power It.

Paragon's NRC SER-approved Highly Integrated Protection System (HIPS) platform delivers the analog-like reliability nuclear demands with modern diagnostics that streamline upgrades, reduce costs, simplify installation time, and keep plants running.

Legacy I&C systems weren't built for today's cybersecurity demands, rising O&M costs, or the complexity of next-generation reactor designs — and it shows.

Cyber-secure, scalable, and flexible across reactor applications, HIPS is built to solve the obsolescence and regulatory issues holding legacy systems back.

For operating plants and next-generation reactors alike, HIPS is ready.
