Ureco USA expanding U.S. uranium enrichment capacity

As America's only commercial-scale producer of enriched uranium, Ureco USA stands at the core of the nation's nuclear fuel supply. Operating the National Enrichment Facility since 2010, we are a trusted partner in fueling the U.S. nuclear fleet.

With nearly two decades of proven experience in building and operating enrichment capacity in the United States, Ureco USA brings unmatched expertise to support our customers navigating rising electricity demand and an evolving energy landscape.

Expanding to support a growing industry

Ureco USA is investing in the future of U.S. nuclear energy by expanding our facility with 2.1 million SWU of new enrichment capacity—a nearly 50% increase.

This expansion directly supports growing customer demand, U.S. Department of Energy priorities, and a stronger, more resilient domestic nuclear fuel supply chain.

By 2036, more than 7 million SWU of capacity will be available to serve the U.S. market.

To meet our customers' evolving needs, we are also now offering enrichment up to 10% U-235 to

support extended LWR operations and to fuel new advanced reactor designs.

Reliable fuel supply. Trusted operational expertise. Proven performance.

Our role is essential in supporting a secure, domestic supply of enriched uranium that enables reliable, safe, and sustainable power generation for American communities and industries.

As the U.S. nuclear industry enters a new era of growth, Ureco USA remains committed to advancing the capabilities that underpin our nation's energy security.

Ureco USA – enriching the next era of American nuclear energy.
