

Radiation Safety & Control Services

Supporting the Next Era of America's Nuclear Industry

Whether supporting new plant development, long-term operations, or decommissioning strategy, utilities are turning to partners that understand the full nuclear lifecycle and the regulatory, radiological, and operational realities that come with it.

RSCS is that partner.

For more than 35 years, RSCS has provided industry-leading radiological project management, decommissioning support, environmental & subsurface investigation, calibration services, and accredited training for utilities across the United States. We help operators reduce risk, enhance safety performance, and optimize decision-making through:

- Major project execution for plant restarts, life-extension, and modernization
- Advanced subsurface & environmental investigation for long-term operations
- Trusted staffing for critical nuclear projects
- Innovative products and software engineered for plant reliability
- Training programs for the next generation of nuclear professionals

Learn how RSCS can support your next nuclear initiative.
