

The POWER of Our PLATFORM

Advancing Nuclear Execution

Our platform delivers integrated nuclear maintenance, engineering, and radiological services as a single solution, reducing complexity and keeping work on schedule.

We provide full-spectrum services spanning outages, routine work, plant modifications, and capital projects. In Spring 2026, we executed 16 outages across customer fleets, supported by specialty services including welding, machining, heat treatment, and instrumentation and controls.

Beyond the operating nuclear reactors, our specialty engineering division supports new nuclear development by solving first-of-a-kind challenges, testing and confirming solutions through our Applied Engineering and Research Center, and applying deep expertise across ASME code, materials, and the nuclear fuel cycle.

From start to success, Allied Power advances your nuclear projects.
