

Meeting the needs of
nuclear generation and its
supply chain

TODAY AND INTO THE FUTURE

The nuclear power industry is changing and requires now more than ever solutions that provide availability and sustainability for generations.

Building upon over 50 years of nuclear experience, Prysmian uses combined advanced materials free of deca-BDE and DBDPE and supported by an NQA-1 and 10CFR50 Appendix B Quality program to produce **ULTROL® 60+** Class 1E nuclear-qualified cables.

Third-party tested to meet Generation III reactor requirements, **ULTROL® 60+** cables exceed stringent IEEE 323 and 383 standards to provide 60-year-plus thermal and radiation resistance supporting nuclear generation new builds and future capacity expansions *TODAY AND INTO THE FUTURE.*
