

MACKSON®
NEXT STOP: DALLAS
 See you at NECX2026!

Delivering on expectations for nearly 80 years

Hard work and customer focus have helped us at Tioga and Mackson Nuclear become the leading suppliers of pipe, fittings, flanges, fasteners, structural steel and related products. Our commitment to customers has helped us grow from humble beginnings into one of the top suppliers of critical materials in the world. Today, we boast an unmatched inventory of specialty metal products in distribution centers within 1-day drive of most major North America Nuclear stations.

Delivering Assurance Daily

To serve customers with increasingly complex and demanding needs, we have dedicated ourselves to having the right people, quality, inventory, vendor relationships, locations, systems and capabilities to get the job done right. That's why customers across a range of today's most vital industries depend on Tioga and Mackson Nuclear to supply their mission-critical materials.

Tioga and Mackson Nuclear know what it takes to supply critical components to the nuclear power industry.

The requirements for nuclear power generation plants are among the strictest in the world. There are few suppliers that can meet those standards, and none of them have our depth of experience in supplying nuclear power stations.

Tioga and Mackson Nuclear have continuously maintained our ASME Nuclear Certificate and QSC distributor status since 1982 — the longest in the US. Our personnel boast 150 years of cumulative nuclear experience ranging from quality assurance to production.

No matter if you need to procure unusual or difficult spec materials, meet special packaging and shipping standards, or carry out tight quality assurance guidelines, we have the experience and know-how to supply your needs.

Whether you require pipe, fittings, plate, forgings, bar or structural steel, we are your source for nuclear quality material supply.

Combined with our unparalleled inventory of special metals, dedicated project management and global sourcing network, you can count on us to deliver the materials you need on-spec and on-schedule, with proper documentation.

We have been audited by NUPIC and NIAC and meet the complex requirements of:

- ASME Section III
- 10CFR50 Appendix B
- N45.2
- NQA-1
- CAN3-Z299 SERIES
