

Retiring Plants. Restoring Landscapes.

At Westinghouse, our decommissioning and environmental services teams are dedicated to more than cleaning up retired plant sites.

As the world leader in nuclear technology — providing products, services and technical expertise to nearly half the world's nuclear power plants — we combine our environmental services solutions and nuclear and chemical operations experience to build and operate advanced treatment facilities for managing waste from the full range of nuclear facilities.

Our knowledge and level of sophistication about decommissioning and environmental services simply cannot be matched by companies that don't possess our level of operating experience.

To learn how we're **shaping tomorrow's energy**, visit us at **Waste Management Symposia from February 26 – March 2** or www.westinghousenuclear.com.
