

# NUCLEAR SCIENCE AND ENGINEERING®

VOLUME 171, NUMBER 3, JULY 2012

## CONTENTS

### TECHNICAL PAPERS

- |     |                                                                                                                                                                     |                                                                                                   |
|-----|---------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------|
| 175 | Development of Self-Interrogation Neutron Resonance Densitometry to Quantify the Fissile Content in PWR Spent LEU and MOX Assemblies                                | <i>Adrienne M. LaFleur,<br/>William S. Charlton,<br/>Howard O. Menlove,<br/>Martyn T. Swinhoe</i> |
| 192 | Evaluation of $^{54}\text{Fe}(n, 2n)$ Cross Sections and Their Covariance Data Below 20 MeV                                                                         | <i>Jing Qian, Min Jia,<br/>Tingjin Liu</i>                                                        |
| 204 | Cross-Section Measurement of Thermal Neutron-Induced Fission on $^{243}\text{Cm}$                                                                                   | <i>L. Popescu, J. Heyse,<br/>J. Wagemans, C. Wagemans</i>                                         |
| 210 | Refining the Accuracy of Predicting Physics Parameters at Research Reactors due to the Limitations in the Energy Balance Method Using MCNP and the ENDF Evaluations | <i>N. J. Peters, J. C. McKibben,<br/>K. Kutikkad, W. H. Miller</i>                                |
| 220 | An Orthonormally Weighted Standardized Time Series for the Error Estimation of Local Tallies in Monte Carlo Criticality Calculation                                 | <i>Taro Ueki</i>                                                                                  |
| 231 | Evaluation and Uncertainty Analysis of the KRITZ-2 Critical Benchmark Experiments                                                                                   | <i>Ivan Kodeli, Luka Snoj</i>                                                                     |
| 239 | On-the-Fly Doppler Broadening for Monte Carlo Codes                                                                                                                 | <i>Gokhan Yesilyurt,<br/>William R. Martin,<br/>Forrest B. Brown</i>                              |

### TECHNICAL NOTE

- |     |                                                                                           |                                                                     |
|-----|-------------------------------------------------------------------------------------------|---------------------------------------------------------------------|
| 258 | Time-Fractional Telegrapher's Equation ( $P_1$ ) Approximation for the Transport Equation | <i>Gilberto Espinosa-Paredes,<br/>Marco Antonio Polo-Labarrrios</i> |
|-----|-------------------------------------------------------------------------------------------|---------------------------------------------------------------------|

- |     |                                       |
