

NUCLEAR SCIENCE AND ENGINEERING®

VOLUME 96, NUMBER 3, JULY 1987

CONTENTS

TECHNICAL PAPERS

- 173 A Critique of Three Methodologies for Estimating the Probability of Containment Failure Due to Steam Explosions *Marshall Berman*
- 192 A Rigorous Pole Representation of Multilevel Cross Sections and Its Practical Applications *R. N. Hwang*
- 210 Calculation of Capture Cross Sections and Gamma-Ray Spectra Following the Interaction of Neutrons with ^{181}Ta and ^{197}Au *Nobuhiro Yamamuro, Kazuyuki Udagawa, Toshihiro Natsume*
- 221 On the Generalized Neutron Noise Formulation with Application to a Coupled Core Reactor *Shyn-Jen Lee*

TECHNICAL NOTES

- 234 Neutron Transport Theory in Ring Reactor *M. M. R. Williams*
- 241 A Comparison of Gamma-Ray Buildup Factors for Low-Z Material and for Low Energies Using Discrete Ordinates and Point Monte Carlo Methods *Yoshiko Harima, Hideo Hirayama, Toshio Ishikawa, Yukio Sakamoto, Shun-ich Tanaka*
- 253 Effect of a Mixing Vane in a Three-Subchannel Simulated Fuel Rod Bundle Using a Gamma Camera *Alireza Sedaghat, Robert Macduff, Frank Castellana*

LETTERS TO THE EDITOR

- 260 Disagreement About the Optimization of Splitting Parameters for Monte Carlo Calculations *T. E. Booth*
- 260 Response to "Disagreement About the Optimization of Splitting Parameters for Monte Carlo Calculations" *A. Dubi*

BOOK REVIEW

- 262 The Three Mile Island Accident: Diagnosis and Prognosis *H. W. Lewis*
