

# NUCLEAR SCIENCE AND ENGINEERING®

VOLUME 111, NUMBER 1, MAY 1992

## CONTENTS

### TECHNICAL PAPERS

- |     |  |   |
|-----|--|---|
| 1   | Canada Deuterium Uranium Reactor Design Optimization Using Three-Dimensional Generalized Perturbation Theory           | <i>D. Rozon, M. Beaudet</i>                       |
| 21  | Reconstruction of Pin Power and Burnup Characteristics from Nodal Calculations in Hexagonal-Z Geometry                 | <i>W. S. Yang, P. J. Finck,<br/>H. Khalil</i>     |
| 34  | A Spectral Nodal Method for One-Group, X, Y-Geometry Discrete Ordinates Problems                                       | <i>Ricardo C. De Barros,<br/>Edward W. Larsen</i> |
| 46  | A Massively Parallel Discrete Ordinates Response Matrix Method for Neutron Transport                                   | <i>U. R. Hanebutte, E. E. Lewis</i>               |
| 57  | An Iterative Algorithm for Solving the Multidimensional Neutron Diffusion Nodal Method Equations on Parallel Computers | <i>Bernadette L. Kirk,<br/>Yousry Y. Azmy</i>     |
| 66  | Estimation of Neutron Flux and Xenon Distributions via Observer-Based Control Theory                                   | <i>Young Ho Park,<br/>Nam Zin Cho</i>             |
| 82  | Ex-Vessel Releases of Radionuclides During Molten Core/Concrete Interactions in Severe Light Water Reactor Accidents   | <i>Min Lee, Jan Sea Wu</i>                        |
| 102 | Time-Dependent Monte Carlo Calculations of the Oak Ridge Electron Linear Accelerator Target Neutron Spectrum           | <i>S. N. Cramer, F. G. Perey</i>                  |
