J. P. HENNART, "Comments on 'Finite-Element Methods for Reactor Analysis,' " *Nucl. Sci. Eng.*, **56**, 225 (1975).

The text beginning in the fourth last line, right-hand column, p. 225, should read:

These norms should be the only ones used for 2-D and 3-D calculations such as those of Ref. 8 (and, in particular, in a similar theorem that I also stated erroneously two years ago in the L_∞ norm[9]). In one-dimensional cases, bounds can be derived in the L_∞ norm using Eq. (1) and sharpened, certainly not with the help of Descloux's work, but rather by techniques such as those developed by Perrin et al.[10] and used, for instance, in Ref. 11.

Finally, Ref. 8 should be to Paper VIII-95-119 in the Proceedings cited.

The Editor regrets these errors in Professor Hennart's Letter.
