

General Subject Index

Volume 176: January, February, March 2014

(CCA): COMPUTER CODE ABSTRACT

^{239}Pu $\bar{\nu}$, 167
2D-1D, 186

A

Aerosols, 154

B

Boiling, 115

C

Carbon dioxide, 138
Continuous finite element method, 201
Correlative neutrons, 350

D

Data assimilation, 325
Dead time, 350
Diffusion acceleration, 201
Discontinuous penalty function, 226
Discrete ordinates, 186
method, 201
Discretization technique, 240

E

ENDF, 167
Expansion method, 292
Explosion potential, 255

G

Galerkin weak form, 201
GEANT4, 370 (CCA)

H

Heat exchanger, 138
Homogenization, 292
HTGRs, 154

I

Incident flux response expansion
method, 273

L

Limited view tomography (LVT), 240
Liquid metals, 115

M

Method of characteristics, 186
Molecular dynamics simulation, 360
Monte Carlo, 370 (CCA)
Multicycle loading pattern
optimization, 226
Multiobjective simulated annealing, 226

N

Neutron multiplicity, 167
counting, 350
Neutron transport equation, 201
Non spherical, 154

R

Reactor kinetics, 370 (CCA)

S

Self-adjoint angular flux, 201
Sensitivity analysis, 325
Sodium-cooled fast reactor (SFR), 115
Steam explosion, 255
Subcritical simulation, 325

T

Thermal-hydraulic characteristics, 138
Thermodynamic properties, 360
Time-dependent coarse mesh
transport theory, 273
Transport theory, 292
Triggerability, 255

U

Uranium dioxide, 360

V

Void fraction measurement, 240

W

Whole-core transport theory
calculations, 273
