

Subject Index

Volume 73 · Numbers 1, 2, 3, and 4
January, March, April, and May 2018

- 100-Gbar Campaign, 89, 107
- Additive manufacturing, 149, 166
- Armor tiles, 75
- Assembly, 453
- Be:B films, 408
- Beam divergence angle, 533
- Beam uniformity, 533
- Blister, 5
- Body current fault, 1
- Burst pressures, 392
- Capillary microfluidic device, 258
- Capsule, 363
 - fill-tube assembly, 107
 - shimming, 279
- Characterization, 132
- CN HCCB TBM system, 34
- Craze and cracks, 59
- Cryogenic D₂/D-T liquid layer, 305
- Cryogenic pellet, 493
- Damage, 315
- Dark-field microscopy, 119
- Data acquisition, 75
- Density measurement, 173
- Depleted uranium, 370
- Detritiation, 50
- Direct drive, 107
 - cryogenic targets, 324
 - inertial confinement fusion, 89
- Disruption mitigation, 493
- Doping, 467
- Double emulsion, 258, 248
- Double shell, 354
- Double-differential cross section, 545
- Droplets, 237
- Drying process, 59
- Dry-machining, 187
- Dynamic material properties, 139, 488
- Electrothermal plasma source, 25
- Engineered foams, 166
- Equation of state, 139, 488
- Evaluation of cross sections, 13
- Excitation function, 545
- Feedback control, 519
- Fill-tube assemblies, 285
- Flow rate, 258
- Foam targets, 153
- Forming polystyrene shells, 248
- Fusion targets, 354, 408
- Fusion-fission hybrid reactor, 559
- Fusion-relevant nuclear reactions, 13
- Gas cell targets, 414
- Gas targets, 481
- Gold electrodeposition, 335
- Gyrotron fault restart, 1
- Gyrotron interlock restart, 1
- H₂-temperature programmed reduction, 50
- Heat transfer, 568
- High energy density, 153
 - physics, 474
- High internal phase emulsion foam, 183
- HL-2M tokamak, 68
- Hohlraums, 127, 194, 279, 370, 481
- Hollow sphere, 229
- Honeycomb catalyst, 50
- Hydrodynamic growth radiography targets, 285
- Hydrogen, 298
- Indirect drive, 210
- Inertial confinement fusion, 98, 187, 194, 293, 335, 354, 380, 408, 423
 - targets, 183
- Intrinsic stress, 265
- Ion implantation, 467
- ITER, 568
- Lab on chip, 248
- Langmuir probe, 568
- Laser direct drive, 98
- Laser entry hole membrane, 481
- Laser Megajoule, 127
- Laser target, 149
- Layering, 298
- Low density, 153
- Lower-hybrid current drive, 539
- Magnetized liner inertial fusion, 98, 414, 423
 - targets, 392
- Magnetron sputtering, 5
- Metal electrodeposition, 219, 335
- Metal particle, 446
- Metallic foils, 400
- Microshell, 132
- Multilayer coating, 265
- Multi-press, 488
- Nanoconfinement, 293
- Nanocrystalline tungsten film, 5
- Nanofoam, 293
- National Ignition Facility, 83, 194, 273, 279, 285, 305, 324, 344, 363, 370, 380
- National Laser Users' Facility program, 434
- Neutral beam injection, 533
- Neutron imaging pinhole, 453
- Nonplanar coil Type 1, 43
- Nuclear data, 13
- Oil, 237
- OMEGA, 324, 423, 446
 - targets, 434

- Opacity, 458
 Oxidation, 552
- Pellet injection, 25
 Permeation, 34
 Physical vapor deposition, 400
 Plasma
 - experiments, 149
 - fueling, 493
 - polymer, 265
 Plasma-facing material, 552
 Plasma-surface interactions, 552
 Plastic bead target, 446
 Platinum electroforming, 219
 Poly(HIPE), 210
 Polyimide composite, 273
 Polyimide windows, 392
 Polymer, 315
 - films, 229
 Polystyrene shells, 59
 Preload system, 68
 Protection system, 75
- Quasi-monochromatic radiography, 173
- Radiation damage, 467
 Radio-frequency window, 539
 Rare-earth elements, 400
 Resistive wall mode, 519
- Sapphire, 539
 Shock propagation, 474
 Silica aerogel, 173
 Solar interior, 458
 Solid-state nuclear magnetic resonance, 183
 Structural analysis, 43
 Sub-micron particles, 119
 Supercritical drying, 229
 Surfactant, 237
- TALYS-1.6, 545
 Targets, 127, 132, 380
 - design, 83, 273, 305
 - fabrication, 344, 453, 458
 - requirements, 83
- Template, 298
 Templated atomic layer deposition foams, 219
 Thorium module, 559
 Tokamak disruption mitigation, 25
 Toroidal field coils, 68
 Tritium, 315
 - release, 34
 Turbulent dynamics, 434
 Turn milling, 187
 Two-photon polymerization, 166
- Uranium module, 559
- Voltage saturation, 519
- Wendelstein 7-X, 43
- Z-beamlet, 414
 Zinc oxide, 210
 Z-Machine, 139
