

Special issue featuring Young Investigators in Fusion

Contents

- iii Foreword
John Echols

TECHNICAL PAPERS

- 1** Uncertainty Quantification of the Decay Gamma Source in Mesh-Based Shutdown Dose Rate Calculations
M. Harb, A. Davis, P. P. H. Wilson
- 13** The LIBRA Experiment: Investigating Robust Tritium Accountancy in Molten FLiBe Exposed to a D-T Fusion Neutron Spectrum
Sara E. Ferry, Kevin B. Woller, Ethan E. Peterson, Caroline Sorensen, Dennis G. Whyte
- 36** Separatrix-to-Wall Simulations of Impurity Transport with a Fully Three-Dimensional Wall in DIII-D
Shawn Zamperini, T. Abrams, J. H. Nichols, J. D. Elder, J. D. Duran, P. C. Stangeby, D. C. Donovan, D. L. Rudakov, A. Wingen, C. Crowe
- 46** Computational Assessment on Impurity Sourcing and Transport Using High-Temperature Graphite and Silicon Carbide Plasma-Facing Walls in a Tokamak Environment
G. Sinclair, T. Abrams, L. Holland
- 60** Fusion Fuel Cycle Inventory Reduction Studies Using a Processing-Time–Based Discrete-Time Interval Model
H. B. Flynn, George Larsen
- 69** What Would Happen to a Fusion Power Plant in the Case of Plasma Disruption? A Dynamic Model Simulation
Shutaro Takeda, Satoshi Konishi
- 77** The Source Permeator System and Tritium Transport in the TEX PbLi Loop
Thomas F. Fuerst, Chase N. Taylor, Paul W. Humrickhouse
