

NUCLEAR SCIENCE AND ENGINEERING®

VOLUME 136, NUMBER 2, OCTOBER 2000

CONTENTS

TECHNICAL PAPERS

- 151 Development of Nonfertile and Evolutionary Mixed-Oxide Nuclear Fuels for Use in Existing Water Reactors
Stacey Eaton, Carl Beard, Kevin Ramsey, John Buksa, Ken Chidester
- 178 Split-Cell, Linear Characteristic Transport Method for Unstructured Tetrahedral Meshes
Kirk A. Mathews, Rodney L. Miller, Charles R. Brennan
- 202 Acceleration of Multidimensional Discrete Ordinates Methods Via Adjacent-Cell Preconditioners
Y. Y. Azmy
- 227 Load-Following Voltage Controller Design for a Static Space Nuclear Power System
Alexander G. Parlos, Fetiye O. Onbasioglu, John D. Metzger
- 247 Application of Temperature Parallel Simulated Annealing to Loading Pattern Optimizations of Pressurized Water Reactors
Akio Yamamoto, Hiroshi Hashimoto
- 258 Cross-Section Measurement for the $^{17}\text{O}(n,p)^{17}\text{N}$ Reaction by 14-MeV Neutrons
Y. Kasugai, Y. Ikeda, H. Sakane
- 265 Calculations for the Excitation Functions of Reactions Induced in ^{63}Cu by Neutrons in the 1- to 20-MeV Energy Range
K. Gul
- 272 Definition of Subcriticality Using the Importance Function for the Production of Fission Neutrons
Keisuke Kobayashi, Kenji Nishihara
- 282 Uniform Gauss-Weight Quadratures for Discrete Ordinate Transport Calculations
John F. Carew, Kai Hu, Gabriel Zamonsky

TECHNICAL NOTES

- 294 Hybrid Skyshine Calculations for Complex Neutron and Gamma-Ray Sources
J. Kenneth Shultis
- 305 A Quantitative Analysis of the Feynman- and Rossi-Alpha Formulas with Multiple Emission Sources
Z. F. Kuang, I. Pázsit
