

NUCLEAR SCIENCE AND ENGINEERING®

VOLUME 147, NUMBER 1, MAY 2004

CONTENTS

TECHNICAL PAPERS

- 1** Some Improvements in State/Parameter Estimation Using the Cell-to-Cell Mapping Technique *Peng Wang, Tunc Aldemir*
- 26** Krylov Subspace Iterations for Deterministic k -Eigenvalue Calculations *James S. Warsa, Todd A. Wareing, Jim E. Morel, John M. McGhee, Richard B. Lehoucq*
- 43** Improvement of MERCURE-6's General Formalism for Calculating Gamma-Ray Buildup Factors in Multilayer Shields *Christophe Suteau, Maurice Chiron, Gilles Arnaud*
- 56** A Model for Dead-Time Effects in Coincidence Counting *Ming-Shih Lu, Theodor Teichmann*
- 63** A Systematics to Investigate the (n, α) Cross Section with Energy Below 20 MeV Based on the Evaporation and Exciton Models *Sheng Fan, Xiaochun Shi, Fang Yan, Hongzhou Zhang, Zhixiang Zhao*
- 73** Production of Neutrons with Protons of 22, 30, and 40 MeV in Stopping Targets of Carbon, Aluminum, Copper, Silver, Tantalum, and Lead *Thomas M. Amos, Robert R. Doering, Aaron Galonsky, Raj Jolly, Mary K. Zigrang*

TECHNICAL NOTE

- 83** The Neutron Production Cross Sections for Pb, Bi, and Au Targets and Neutron Multiplicity for Nuclear Spallation Reaction Induced by 20- to 1600-MeV Protons *İ. Demirkol, E. Tel, A. Arasoğlu, A. Özmen, B. Şarer, A. Acir, M. Alkan*
